## **Sustainable Roofing Products Manufacturer Selects Metasystems® ICIM® ERP Business System Solution**

**Cleveland, OH – Metasystems, Inc.**, an enterprise software provider for discrete manufacturers, and the authors of their integrated configuration based ERP software known as ICIM, announced the addition of a new business partnership with a local roofing manufacturer.

**LaGrange, OH - West Development Group, LLC** a family owned manufacturing company that specializes in silicone and polyurethane foam technologies used for roofing applications; needed to get a handle on their business processes and current operations. As their business rapidly expanded, the company realized that their homegrown tracking was no longer meeting the company's needs so they began the search to find an integrated business system which would allow them to be more productive. The software selection team was looking for an integrated manufacturing software package that could be customized to meet their unique business needs, including the ability to improve purchasing, inventory control, formula maintenance, lot tracking, recycling material tracking and tight integration with Financials. ICIM allows them to access real-time information that will help them tighten lead times, control costs, produce workflow notification between departments for new orders and work order changes, and access real-time financial analysis for up to the minute review. No longer would they wonder if invoicing was completed for each shipment as ICIM tracks every order from a quote to cash business flow. Along with our local connection, there was an instant connection between their selection/implementation team and the Metasystems team. Finding the right software to meet your needs is important, but finding the right team to work with you and who takes the time to understand your business is even more important!

**Metasystems, Inc.**, celebrating 30+ years in business, has been providing their "ICIM" ERP (Enterprise Resource Planning) software to small and mid-sized manufacturing companies across the U.S., Canada and U.K. ICIM is extremely flexible and modifiable to meet manufacturer's unique business requirements; integrating Sales, CRM, Engineering, Manufacturing, Financials and Warranty Management. As the authors, developers, programmers, implementers and supporters for ICIM, the Metasystems team can adapt ICIM to fit your unique business requirements to give you the business solution you need. The flexibility and scalability of ICIM allows us to reach a wide range of manufacturing industries. For more information, visit our website: <http://www.metasystems.com/ICIM-ERP-Software.htm> or contact us at 1-800-788-5253 with your requirements to see if ICIM and if our Metasystems team will be a good fit for you.
